

Power Premier Properties with a **Boingo Private Network**

Competition, COVID-19 recovery, increased vacancies, rising operational costs. The challenges facing commercial real estate properties have never been greater. To overcome challenges, leading properties are turning to 5G technologies to exceed tenant expectations, increase operational efficiencies and fast-track smart building bottom-line benefits. Take advantage of 5G possibilities with a Boingo Private Network.

Why a Private Network?

A Boingo private wireless network provides ultra-reliable, fast, super-secure bandwidth to power Class A properties' connected needs. These closed networks give property managers direct control over wireless coverage, location, quality and security with dedicated bandwidth that is designed to connect IoT, operations, tenants and guests.

CONNECT YOUR DIGITAL TRANSFORMATION

Touchless Entry

Faster, simplified entry for tenants and visitors

Enhanced Security

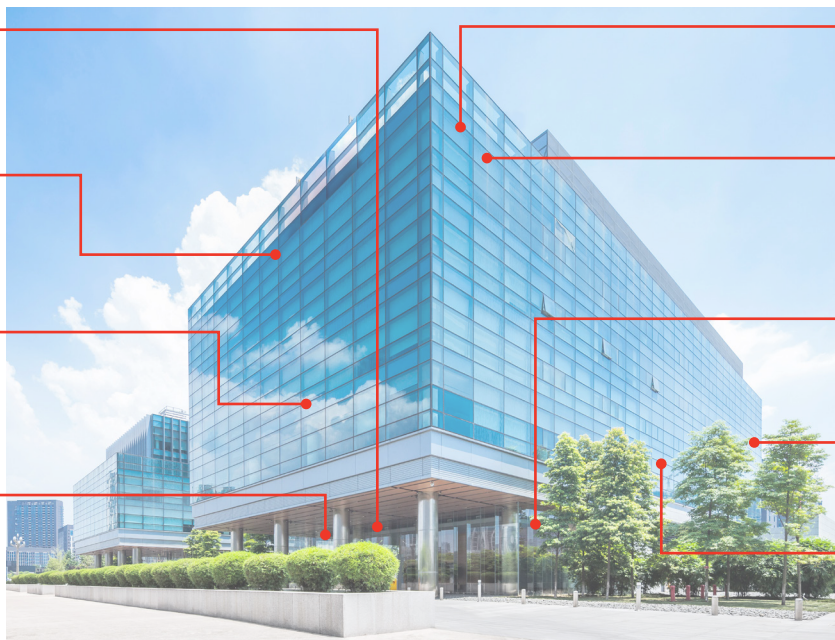

Next-gen security cameras with robust analytics and monitoring

Connected Utilities

Connected thermostats and smart lighting managed on one network

Cashless Environment

Secure Point of Sale (POS) connectivity to support touchless transactions

Data Protection

Access and transfer sensitive data on a secure network

Increased Coverage

High-speed and reliable connectivity in traditionally hard to reach locations

Prepay Parking

Book and pay ahead for added convenience and contactless experience

Real-Time Communication

Digital signage for live updates and safety reminders

Streamlined Operations

Robotic cleaning devices and sensors with automatic maintenance alerts

SECURITY AND SPEED: THE 411 ON MEC

Boingo's Multi-access Edge Compute (MEC) solutions bring network processing to the venue, resulting in a myriad of benefits:

- Highly secure data environment because data does not need to leave the premises.
- Ultra-low latency, super-charged processing power in near real time.
- Layered tools like HVAC control and video monitoring enabled through MEC bring rich data insights to venues. Boingo partners can utilize MEC to process their own data including property maintenance insights, security alerts and more.

ULTRA-RELIABLE WIRELESS ON YOUR TERMS

COVERAGE: Delineate wireless coverage location based on your goals and coverage gaps.

CONTROL: Define which users, devices and use cases connect to the network.

CAPACITY: Move operations traffic off the public network to free up capacity and improve the overall connected experience.

FLEXIBILITY: Quickly adapt to changing business and tenant needs with flexible wireless infrastructure.

SECURITY: Enhance security with a closed network and on-premises data processing via Boingo's Multi-access Edge Compute (MEC) solution.

EFFICIENCY: Realize cost savings and increase productivity with connected operations.

DATA & ANALYTICS: Gain rich insights by digitizing property operations.

TURNKEY SOLUTION: Reduce headaches with Boingo's turnkey, cost effective solution. Our Network as a Service (NaaS) model provides end-to-end support including design, network management and everything in between, allowing you to focus on what you do best.

THE BOINGO DIFFERENCE

Boingo is one of the largest operators of indoor wireless networks in the United States. Take advantage of our 20+ years of experience, converged neutral host network solutions, 24x7 network management and on-demand insights to power your building's digital transformation.
